IMPORTANT: Look for a location with the best signal reception around your house. It is recommended to place the antenna at minimum height of 10ft for best results.

Attaching/Detaching Stand:
To detach the stand use a flat screwdriver (not included) to help squeeze the WiFi antenna out from the stand as shown on the illustration below. The antenna can be reattached by squeezing the area shown on the illustration below to the right and placing it into the stand. Make sure to detach the stand when installing the antenna on a wall or pole.

PARTS: Reference Illustration to the right.
1. 1x Mount Bracket
2. 4x Hex Nuts
3. 1x Pole clamp
4. 2x Screws
5. 2x Drywall anchors

Tools Required: (NOT INCLUDED)
- Phillips head screw driver
- Driver & socket wrench & power drill

Wall Installation:
1. Detach WIFI antenna from base as instructed above.

2. Place mounting bracket (#1) on desired location for installation and mark the two holes on the wall surface.

3. Attach the mounting bracket (#1) to the back of the wireless antenna by matching the 4 holes on the bracket with the 4 screws attached to the antenna (as shown on the illustration to the right). Thread the 4 Hex Nuts (#2) onto the screws and tighten with a socket wrench (not included) to secure bracket.

4. Drill through the center of each hole marked on the wall surface using a 1/8” drill bit 1” deep. If wall is hollow drill the same holes again using a ¼” drill bit and insert the wall anchors. Tap lightly with a hammer until the wall anchor is flushed with the wall surface. If you hit a wall stud use only the enclosed screws.

5. Using a Phillips screw driver (not included) thread both screws into the wall surface/wall anchors leaving an 1/8” of the screw head out to hang antenna.

6. Line up the holes on the mounting bracket with the screw heads on the wall and hang. Make sure USB cable is facing downward.

Pole Installation:
1. Detach WIFI antenna from base as instructed on page 1

2. Loosen the pole mounting clamp (#3) by turning the screw counterclockwise until the end is detached from the locking mechanism.

3. Hook the pole mounting clamp (#3) around the mounting bracket (#1) as shown on the illustration to the right.

4. Wrap the clamp around the pole and stick the end back into the locking mechanism. Use a screw driver to tighten to tighten the clamp. Cut the clamp tail shorter if needed.

5. Attach the mounting bracket (#1) to the back of the wireless antenna by matching the 4 holes on the bracket with the 4 screws attached to the antenna (as shown on the illustration below). Thread the 4 Hex Nuts (#2) onto the screws and tighten with a socket wrench (not included) to secure antenna.
Long Distance Wifi Antenna

Software Installation:
Compatibility: Window Xp, Vista, 7
Minimum USB2.0 interface required.

IMPORTANT NOTE: Install software CD according to instructions below, BEFORE antenna is plugged in. Always avoid connecting via a USB hub or an extension cable.

1) Insert software CD into your computer’s disk drive. The setup software will start automatically after a few seconds. An Autoplay window (shown below) will pop-up, click on open folder to view files. If Autoplay window does not appear click on START menu then my choose "My Computer" and double click the CD-ROM drive.
